NEWS RELEASE

June 17th, 2010

TSX-VENTURE: JNY
FRANKFURT: JL4

For Immediate Release

CHARAY PROJECT UPDATE

Vancouver, B.C. – JOURNEY RESOURCES CORP. (“Journey” or the “Company”) is pleased to provide an update on the Charay gold-silver deposit located near (35 km northeast) the town of Los Mochis, Sinaloa state, Mexico.

RJR Mineral Services is preparing a plan of operation for test mining of a bulk sample (+/- 35,000 tonnes). Mining of this bulk sample will follow preparation of a resource estimate after the next phase of exploration.

Preliminary results of the process testing program, achieved gold and silver recoveries of 89% and 60% respectively in a flotation concentrate from the Charay vein. The best results were obtained by grinding samples at 80% passing 200 mesh. Gold and silver recoveries of 86% and 65% respectively were obtained from flotation of the near surface vein mineralization, where there is some oxidization of the vein material. A finer grind at 80% passing 325 mesh was required for this material. The results are particularly encouraging, suggesting that the mineralization at Charay could be processed in existing mills in the area.

Additional testing will be undertaken, using flotation as well as conventional gold processing methods.

The first phase of the exploration program includes trenching along the projected extensions of the vein and approximately 14 core holes to be drilled on a 50m by 50m grid to a 100m depth. The second phase drill targets will be prioritized based on results from the first phase trenching and drilling. Results from the 2010 work program will assist in the preparation of a resource estimate, feasibility studies and mine planning.

In 2008, the Company acquired an option on the Charay property, which comprises three mineral concessions covering approximately 380 hectares located in northern Sinaloa State, Mexico, approximately 250 km northwest of the state capital Culiacan. In 2005, Vane Minerals Group drilled 27 shallow holes on the property, nineteen of which targeted and intersected mineralized epithermal quartz veining along a 240 meter strike length of the El Padre vein.

The qualified person for the project, Phil Van Angeren, P.Geol, has prepared a 43-101 compliant report for Journey. This report is available for viewing on the company website (www.journeyresourcescorp.com).

About Journey Resources Corp.

Journey Resources Corp. www.journeyresourcescorp.com is a mineral-exploration resource company trading on the TSX Venture Exchange (Symbol : JNY) and the Frankfurt Stock Exchange (Symbol : JL4). The Company is currently exploring four advanced exploration-stage projects; the Musgrove Gold Project, the Charay Gold Project, the Vianey Mine Silver Project and the Silver Mountain Project. The Musgrove Project is a prospect for a disseminated gold bulk-tonnage surface project similar to the Beartrack Mine, a nearby former gold producer. The Charay property consists of concessions totaling 380 hectares, located in Sinaloa, Mexico. The Vianey Mine Project consists of concessions totaling 5,022 hectares in Guerrero State west of Mexico City, Mexico. In addition, the Company owns 100% right, title and interest in and to certain mining claims comprising the Silver Mountain Property in Lima, Peru. The Silver Mountain Property is an advanced stage exploration property covering approximately 1,684 hectares, located approximately 75 kilometers east of Lima City and 50 kilometers south of Peru Copper’s Toromocho property and Pan American Silver’s Morococho Mine.
